## Platform Curve Layout Guide

This is the "PLAN VIEW" of the transom.

Using a straight edge along the width of the boat, locate center and mark the dimensional increments as shown in the sketch below to the outboard ends of each side. The dimensional increments from center are defined in inches from each side of 0" to the Port and Starboard sides of the boat. The dimension of "A" must be identical for accuracy. This is the horizontal distance from the transom at each end to the straight edge..

On this side record the horizontal dimension between the transom and the straight edge for each dimensional location on both sides of center.

Note: This layout guide accommodates transom widths up to 16'.
